## Overview

Reproducibility report info for data-science/Monthly\_Reports scripts.

## metric\_data\_updates.R

### Issues

#### Installing/Restoring `renv`

Issue: `renv::restore()` failed on Matrix package

Output:

Error:

! error in pak subprocess

Caused by error in `stop\_task\_build(state, worker)`:

! Failed to build source package Matrix.

Full installation output:

\* installing \*source\* package 'Matrix' ...

\*\* this is package 'Matrix' version '1.7-1'

\*\* package 'Matrix' successfully unpacked and MD5 sums checked

staged installation is only possible with locking

\*\* using non-staged installation

\*\* libs

using C compiler: 'Apple clang version 17.0.0 (clang-1700.0.13.5)'

using SDK: 'MacOSX15.5.sdk'

clang -arch arm64 -I"/Library/Frameworks/R.framework/Versions/4.5-arm64/Resources/include" -I

In file included from Csparse.c:1:

./Mdefines.h:41:11: fatal error: 'libintl.h' file not found

41 | # include <libintl.h>

| ~~~~~~

1 error generated.

make: \*\*\* [Csparse.o] Error 1

ERROR: compilation failed for package 'Matrix'

\* removing '/private/var/folders/p9/kr0r1brn59995m7w8m3x7qp00000gp/T/Rtmpf1uCVz/pkg-lib67f06'

Solution: Remove and reinstall renv

Solution-Method:

1. Manually deleted renv, renv.lock, and .RProfile
2. Reinstalled renv using `renv::install()`

Consequences:

- Lockfile updated to R 4.5.0

## Writing/Appending to Google Sheets

Issues/Assumptions:

- Everyone has access to the production and testing sheets
- Because `sheet_append()` does not write header names, it won't work when writing header names to a new (or existing, but empty) sheet

Solutions:

- Alex requested write access to the production sheets
- Generated a set of testing sheets for DS access on Google Drive at “data-science-locked/testing”
- Simplified logic for running on testing sheets or production sheets
- Wrote exception handler for `sheet_append()`: `sheet_write()` if not existing, `sheet_append()` if existing.

## Ergonomic Changes

- Subdivided code into sections for preamble, functions, and main and migrated code accordingly:
  - Moved authentication call to MAIN
- R now supports the pipe operator natively, so replace all `%>%` with `|>`
- QUESTION: Should we use a linter for our R scripts?

## Session Info

```
sessioninfo::session_info()
